May – July 2019

- Technologies: Spring Boot, Hibernate H2, Java Persistence APIs, React Native, Google Maps API
- Worked on the back end of a web application to connect Non-Government Organizations (NGOs) to potential donors
- Worked on creating a mobile version of the company's web application

Web and Mobile Development Intern, Oakland Systems Pvt. Ltd., Nagpur

Dec 2018 – June 2019

- Technologies: React Native, Spring, Hibernate
- Worked on two mobile apps developed in React Native, both on Android and iOS
- Developed modules using Spring and Hibernate for the company's web applications

Full Stack Development Intern, Oakland Systems Pvt. Ltd., Nagpur

May – June 2018

- Technologies: JavaScript, W3C Community Web Speech API, Java, MySQL
- Developed a web application for medical forms that could be configured according to the examiner's needs
- Used the W3C Community Web Speech API to make the filling of the form voice controlled
- Linked the application to a back end to store configurations and pronunciation variations

Projects

VirTalks (ongoing)

- React Native app to facilitate smooth communication between the Deaf and hearing
- VirTalks uses Google APIs for speech recognition and synthesis
- Also implemented a save-conversation feature using SQLite

VChat (Chat Application) - [GitHub](#)

- Chat application developed in Flutter with a Firebase backend
- The app supports login/signup using email, creation of groups, and shows date and time for messages

Quiz-App (Quiz Application) - [GitHub](#)

- React Native quiz app which is completely voice controlled
- Questions are read out and users can answer by speaking. Used Google APIs to implement speech recognition and synthesis

Chat-App (Chat Application) - [GitHub](#)

- React Native chat application that supports login/signup using usernames
- Implemented the back end in Java and JDBC to communicate with a MySQL database

Unity3D Games (Android) – [Google Play](#)

- Created multiple Android games in the Unity3D game engine
- Implemented High scores and Achievements using the Google Play Services API
- Created a Virtual Reality game for Google Cardboard using the Google Cardboard plugin for Unity

Data Visualization (Guide: Mr. Yashavant Kanetkar)

- Implemented data structures using recursive and non-recursive algorithms
- Created flash animations to demonstrate the working of data structures such as BSTs

C++ Libraries (Guide: Mr. Yashavant Kanetkar)

- C++ libraries developed using the command line as well as the Netbeans IDE
- Developed both static and dynamic linking libraries
